Global Tooling Solutions Introduces PSL Series Chucks

Global Tooling Solutions, the exclusive US and Latin American dealer for FUERDA Lathe Chucks, has introduced the PSL Series of 3-jaw self-centering scroll chucks with a low profile design and an extra large thru hole. These chucks are available in 15-3/4-, 20- and 26-inch diameters.

PSL Series Chucks are designed for pipe machining, welding or cut off operations. They can be used on lathes, milling machines, rotary tables, indexers or welding fixtures-any application where a large thru-hole is required.

“FUERDA PSL Series Chucks are made of high-quality forged steel, guaranteeing high rigidity and accuracy, and are provided with 2-piece American National Standard tongue and groove jaws,” said a company spokesperson. “This gives the end user the flexibility to use any other ANSI standard top jaws for a variety of applications. Soft-top jaws are available from stock. Chuck jaw guideways, hub, scroll and jaws are heat treated and precisely ground. These chucks are designed and produced for back mount applications but can be easily converted for front mount applications for use on rotary tables or indexers. The low profile design is suitable for these kinds of applications.”
